

Seminar in Microbiology

Monday, October 12, 2015

Salle de séminaire 7172, CMU

11:30 – 12:30

Dr. Olivier NEYROLLES

Dept. of Tuberculosis & Infection Biology, Institute of Pharmacology &
Structural Biology, CNRS-University of Toulouse, France

Host-pathogen interactions in tuberculosis

Dr. Neyrolles studies various aspects of the microbiology and cell biology of mycobacterial infections. *Mycobacterium tuberculosis* is a facultative intracellular pathogen that thrives inside host macrophages. A key trait of *M. tuberculosis* is to exploit and manipulate nutrient trafficking inside infected macrophages to ensure survival and replication inside the phagosome. Here, Dr. Neyrolles will discuss recent discoveries about transition metal and amino acid exploitation in the arms race between *M. tuberculosis* and the immune system, and how targeted approaches might complement existing TB chemotherapeutic regimens with novel anti-infective therapies.
